

Wireless Programs

WiFi • Wireless VoIP • Security

Let Shoshin Technologies provide your business, residential & hospitality complexes, medical or educational complex a seamless and powerful cloud based Wi-Fi system or wireless VoIP phone system even in high density buildings, large areas or heavily forested areas. We provide all integration, implementation and continuous remote oversight without burdening your employees, students or residents.

Just some of our Benefits and Features include:

Remotely Managed by Shoshin Technologies- we provide powerful and intuitive centralized WiFi management without the cost and complexity. We can seamlessly manage campus-wide WiFi deployments and multi-site networks with zero-touch responsibility on your part.

Guest WiFi- offers secure, easy to manage guest access without complex configurations. Shoshin's built-in firewall and server provides a complete guest WiFi solution, allowing you to customize your guest experience enabling secure, Internet-only access that protects your clients from virus or information leaks.

Security for your Network- Shoshin Technologies provides complete out-of-the-box enterprise class security. Segment wireless users, applications and devices; secure your network from attacks; and enforce the right policies. Our Guest Access Firewall provides secure, Internet-only guest WiFi in just one click. We enable secure wireless environments without complex setup or systems integration.

High Density Capacity- We provide high capacity wireless in dense, demanding environments such as condo complexes and highly forested areas. Our devices are custom designed for cloud management plus, are automatically tuned for highest performance.

Prioritize Devices, Users and Apps- Identify hundreds of applications, from business apps to BitTorrent and YouTube. Prioritize critical apps like VoIP, and limit or block wasteful bandwidth consumption. Shoshin Technologies will apply policies by group or device type, automatically set bandwidth limits and firewall policies to iPads and other device types.

Enjoy Cost Savings- Our cloud-based control provides secure, reliable centralized management without the cost and complexity of traditional hardware-based WiFi controllers. Customers typically save up to 50% over traditional controller-based solutions. Let Shoshin Technologies provide your business, residential, medical or educational complex a seamless and powerful cloud based Wi-Fi system or VoIP phone system.
